A Platform Inside a Media Company — FunAsia Smart Reach

Most agencies rent channels. FunAsia owns them — and brings every one of them to your practice under a single plan, a single team, and a single accountability structure.

What Smart ReachTM Does

Smart ReachTM is a full-funnel advertising engine purpose-built for healthcare. It combines premium inventory, precision targeting, and real-time performance measurement — all without touching patient data.

Formats

Display and native, online video, connected TV and OTT, and digital out-of-home — one audience across every screen in the household.

Targeting

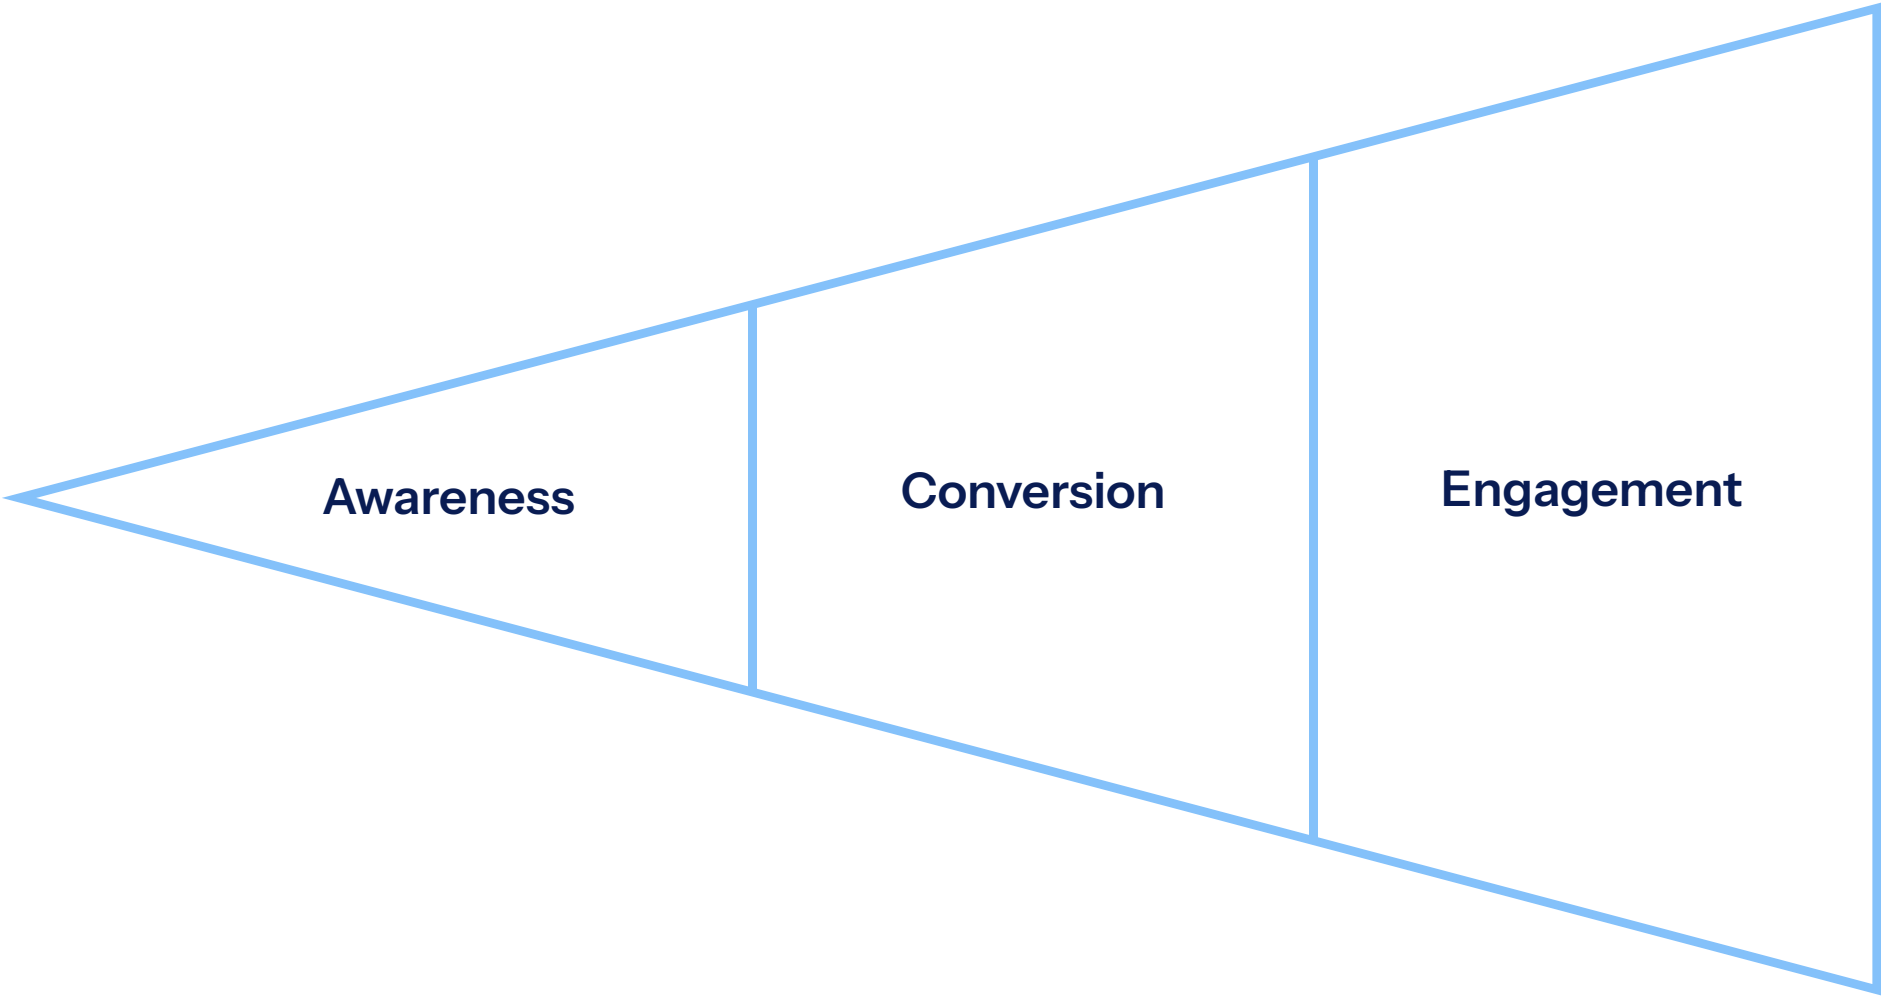

Geography down to the address, retargeting, competitor conquest, demographic, contextual, and lookalike modeling — all built without patient data.

Measurement

Real-time AI bid optimization, cross-device tracking, call and form attribution, and a live dashboard you can open any day of the month.

The Integrated Model

Patients rarely click an ad and book the same minute. The Smart ReachTM model is built for the gap between first impression and booked chair time — covering every stage of a long consideration journey.

Each stage reinforces the next. Awareness creates recall, engagement sustains interest, and conversion infrastructure captures intent — all tracked to booked patients, not impressions.
